## Electric Forces and Electric Fields Worksheet

1. What is the electrical force between a Helium nucleus (two protons) and an electron 1.3 x $10^{-9} \mathrm{~m}$ away?
2. A. What is the strength of the electric field $2 \times 10^{-4} \mathrm{~m}$ away from a charge of $5 \times 10^{-6} \mathrm{C}$ ?
B. What is the force on an electron placed at the point indicated in part a?
3. How far apart are two charges of magnitude $3.2 \times 10^{-19} \mathrm{C}$ if they exert a force of $5 \times 10^{-16}$ N on each other?
4. If the force on a proton in an electric field is 0.005 N , then what is the strength of the electric field?
5. What is the electric force on a charge of 3 C if it is in an electric field of $5 \times 10^{-8} \mathrm{~N} / \mathrm{C}$ ?
6. What is the electric field $2 \times 10^{-10} \mathrm{~m}$ away from an Iron nucleus ( 26 protons)?
7. If the force on a electron in an electric field is $4 \times 10^{-8} \mathrm{~N}$, then what is the strength of the electric field?
8. What is the electric force on a charge of $1.5 \times 10^{-4} \mathrm{C}$ if it is in an electric field of $2.4 \times 10^{-7} \mathrm{~N} / \mathrm{C}$ ?
9. A. What is the strength of the electric field $12 \times 10^{-7} \mathrm{~m}$ away from a charge of $4 \times 10^{-3} \mathrm{C}$ ?
B. What is the force on a proton placed at the point indicated in part a?
10. How far apart are two charges of magnitude 5 C if they exert a force of $4.3 \times 10^{-5} \mathrm{~N}$ on each other?
