

Appendix B - Constructing the Helicopter

The following instructions use the George Box helicopter template that is included.

1. Cut out the rectangular outline of the helicopter.
2. At the 10 cm mark, cut one-third of the way in from each side of the helicopter to the vertical dashed lines.
3. Fold both sides toward the center creating the base. The base can be stapled at the top and bottom. Try to be consistent about where the staples are placed and how many staples are used.
4. For long-rotor helicopters, cut down from the top along the center line to the horizontal dashed line.
5. For short-rotor helicopters, proceed as in step 4, but cut the rotors off along the horizontal line marked at 5 cm.
6. Fold the rotors in opposite directions.
