

Net Force Equations Worksheet 2

No friction

1. What percent of 'F' is the push force of A on B?
2. A hockey puck slides to a stop on a wooden floor $\mu_k = .4$. No forces other than friction act on the puck. The puck has initial velocity 40 m/s . What is the time required for the puck to stop?

3.

A 6m block maintains static friction with a 3m block, however there is no friction between the 3m block and the ground. Find μ_s

between the blocks given that $M = 3 \text{ kg}$, $g = 10 \text{ N/kg}$ & $F = 40 \text{ N}$.

4. For #3, now assume there is friction between the 6m block and the ground such that $\mu_s = \mu_k$. What is the force accelerating the 6m block?

5.

$g = 10 \text{ N/kg}$

What percent of the applied force 'F' is the tension force 'T' in the rope connecting the two blocks?

6. True or False

The direction from which a net force is applied affects the magnitude of acceleration.
